Dear Authoritative,

I am making this application because your position in your company's posting is suitable for my education, experience, knowledge and skills, and career goals, and I would like to work with you as an intern/employee.

In the Summer of 2023, I will graduate from Bandirma Onyedi Eylul University Management Information Systems Department, I have been focusing mainly on Full-Stack Web Development technologies for more than 1 year. In this process, I can say that I have gained all the requirements of a developer and that I have the knowledge and experience of a Computer Engineering graduate friend, or maybe a little more.

I continued my Full-Stack Developer training from many sources, among these sources is the basis of my bootcamp training named CodeCademy based in America. In addition, I have succesfully passed every programming lesson since my first year at school. In addition to these resources, I have also benefited from sites such as Udemy and Freecodecamp, and I have seen that these trainings have made a great contribution to bringing me the necessary competence.

In the process of being a developer, I used technologies such as React, Vue, Bootstrap, HTML, CSS, SQL, NoSQL, Tailwindcss, MaterialUI, Nodejs, MongoDB, ExpressJs and many more related technologies written in my CV. Although I am mainly a React and Nodejs developer, I can easily adapt to other software languages and technologies.

In addition to my individual experiences, I did a 2-month internship as a Front-End(React) developer at inverizo. Before this process, I also helped the projects of CS and CTIS students at Bilkent University.

I am devoting my career to being a Successful Full-Stack Developer for more than 1 year. During this process, I managed to make individual projects as much as possible and tried to use different technologies in each project.

If you wish, I would like to have a face-to-face/online and detailed interview with you at any time to discuss the requirements of the position and my suitability for the position, and if you have technical tests you have applied, I would like to show myself at the relevant stages.

Yours Sincerely,

Caner Özüş
